Cholo

much lighter than that of the average North American Indians.

In a word, therefore, the Cayapa may be said to be a well proportioned, though somewhat undersized, light-brown people, with brachycephalic heads, black or dark-brown hair which varies from straight to wavy, to show considerable variation in the shape of the nose, to have very dark-brown eyes, wide upper lips, full and fairly high foreheads, high cheekbones and round faces, and to have supraorbital ridges and chins that are not at all prominent.

No opportunity was presented to measure the few Cholo who live on the Rio Cayapas. They are, however, of quite a different type from the Cayapa, being somewhat shorter and more thick-set than the latter, and as a rule more mongoloid in general appearance. In pls. CXI-CXIII are shown two boys, two girls, and one young man of about twenty-one years, all members of this tribe.

Measurements

In the accompanying tables the following abbreviations are used:

St, Stature.
Sr, Stretch of arms.
Sh, Height of shoulder (acromion).
Hmf, Height of middle finger from surface upon which heel rests.
